

# Our path from Scrum to Kanban

Vaclav Uher
PDM Integrations
Kerio Technologies

#### Systems we Integrate

# The Scrum way of development

- Plan for the sprint
- Starting the work
- Unplanned interruptions
- Not fulfilling the planned sprints
- We've started allocating a 'unplanned' story to each sprint
- That still wasn't working

#### What are the options

More resources

Do not allow interruptions/changes

Be involved in every communication

Give up...

# Our way?

Hiring a 1<sup>st</sup> level support

 We've decided to 'give up' trying to do Scrum

 So what should we do if we want to keep it agile and not to fall to complete anarchy?

KERIO

# Our way?

- Hiring a 1<sup>st</sup> level support
- We've decided to 'give up' trying to do Scrum

- So what should we do if we want to keep it agile and not to fall to complete anarchy?
- We've started to merge Scrum with Kanban

#### Starting with Scrumban

Keeping the daily standups

- Still working with the scrum board columns
- Making retrospectives after bigger projects/ several smaller ones
- Removing the weekly estimates
- trying to split all stories to same sized tasks

# Starting the Kanban way of development

First we've tried to let all columns without WIP limits

Later we've introduced WIP to just a few columns

With the limits we've found out problems not just in our team

#### What have we achieved

- The speed of development increased a lot
- Including more QA to development
- Setting up of full staging and sbox environments
- Automating of some annoying manual work during the deployment
- Continuous delivery
- DoD

KERIO

#### Nothing is perfect

Still a lot of work to be done

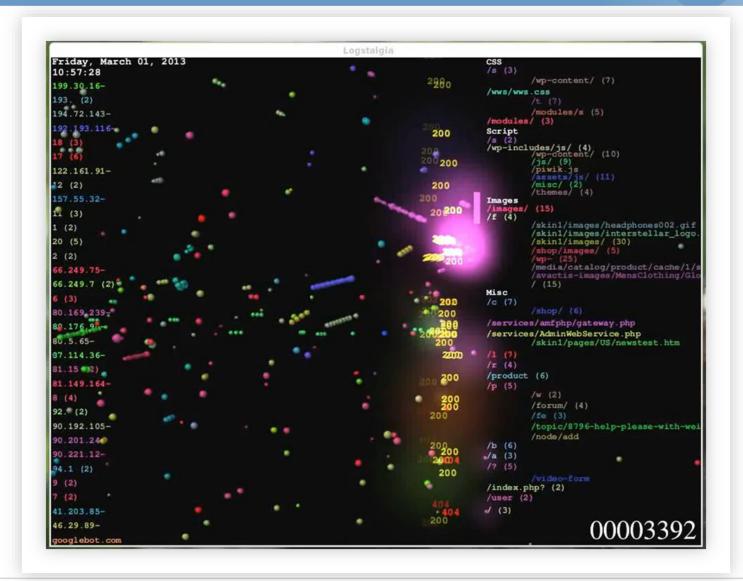

The WIP limits across the company

Velocity measurement

 Giving a delivery date for big project still does not work (more urgent stuff is still coming)

❖ KERIO

#### One day maybe

Thank you
